I am a passionate and driven individual seeking for a position as a Full Stack, Frontend, or Backend developer. Proficient in React, Node.js, MongoDB, and Express, I have a proven ability to quickly learn new technologies. With a strong attention to detail and excellent problem-solving skills, I specialize in creating visually appealing single-page applications. My goal is to contribute my skills and expertise to a challenging development role.

Experience

Front End Developer

Jane

January 2024 - May 2024

- Maintained, developed, and designed the user interface across 3 different codebases using Next.js and TailwindCSS.
- Achieved a balance between functional, aesthetic, and responsive designs, while ensuring code readability and reusability.
- Collaborated closely with cross-functional teams, including designers and backend developers, to implement feature-rich, user-centric solutions that aligned with the company's objectives and enhanced the overall product experience.

Projects

- Project Management Application

- As a final project at HackerU, I developed a comprehensive project management application serving as a centralized platform for teams to efficiently manage and execute projects, resulting in improved productivity and efficiency. Grade: 98
- The goal of this project was to develop an end-to-end application using multiple technologies while focusing on the logic as well as the UI, resulting in great user-experience.
