I am a passionate and driven individual seeking to launch my career as a Full Stack, Frontend, or Backend Developer. Proficient in React, Node.js, MongoDB, and Express, I have a proven ability to quickly learn new technologies. With a strong attention to detail and excellent problem-solving skills, I specialize in creating visually appealing single-page applications. My goal is to contribute my skills and expertise to a challenging development role.

## Technical Skills

---

- React | Redux | TypeScript | JavaScript ES6+ | HTML5 | CSS3 | SASS
- Node.js | Express | MongoDB | SQL | PostgreSQL

## Experience

---

- *Project Management Application:*
  - As a final project at HackerU, I developed a comprehensive project management application serving as a centralized platform for teams to efficiently manage and execute projects, resulting in improved productivity and efficiency. Grade: 98
  - The goal of this project was to develop an end-to-end application using multiple technologies while focusing on the logic as well as the UI, resulting in great user-experience.
  - Project link: <https://tomrossner.github.io/project-mania/>
- *Face Recognition Application:*
  - Created an advanced face recognition application that harnesses the capabilities of the Clarifai API. The application utilizes machine learning algorithms to achieve accurate detection and identification of faces in images.
  - This project's goal was to practice working with multiple technologies and fetching data from a RESTful API, in order to deliver an accurate face recognition solution.
